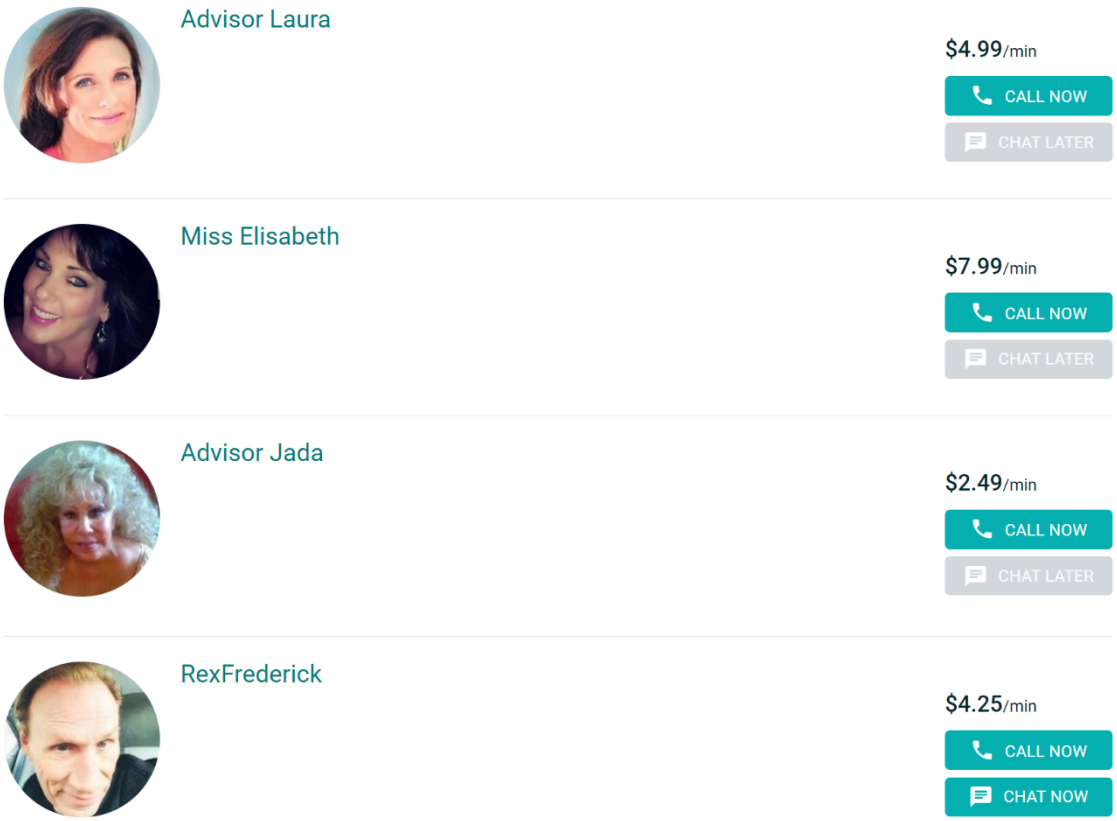
Advisor Availability

Below is a mock of a collection of advisors:



- Implement a listings page as shown above with a collection of advisors. There are two buttons: Call button and Chat button. Call button can have two states: CALL NOW (clickable) and CALL LATER (grayed out and not clickable). Chat button can also have two states: CHAT NOW (clickable) and CHAT LATER (grayed out and not clickable).

- Use below mock API to fetch collection of advisors
  GET https://demo2255213.mockable.io/listings

  BONUS :
- Call-Availability and Chat-Availability are dynamic and can keep changing. So, every 30s, get latest availability and update state of call and chat buttons. This mock API can be used:
  https://demo2255213.mockable.io/advisor-availability?advisorId=100

NOTES:

- Please use React/Next.JS. Feel free to use any component library, like MUI.
- Please provide github or codesandbox link to evaluate. Emailing compressed full solution is also fine. Make sure you provide all instructions to easily execute your solution.
- We would also appreciate if you could provide time taken to implement this.

All the best and have fun coding 😊
